

How the Pepco Energy Wise Rewards Program Works
Programmable Thermostat

1. Sign up

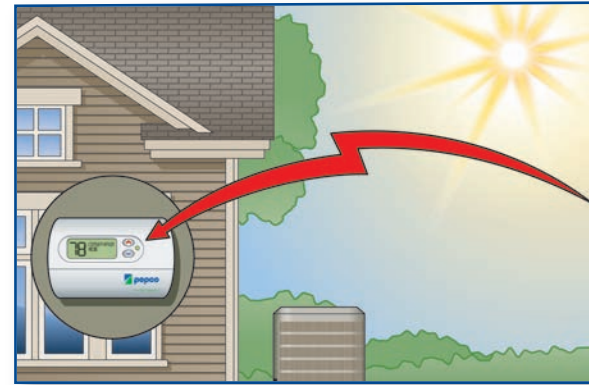

It's easy to sign up for Pepco Energy Wise Rewards. Simply have your account number ready, complete and return the postage-paid reply card, visit our website, or call us to speak to an Energy Wise Rewards customer representative today.

2. Energy Wise Rewards device installed

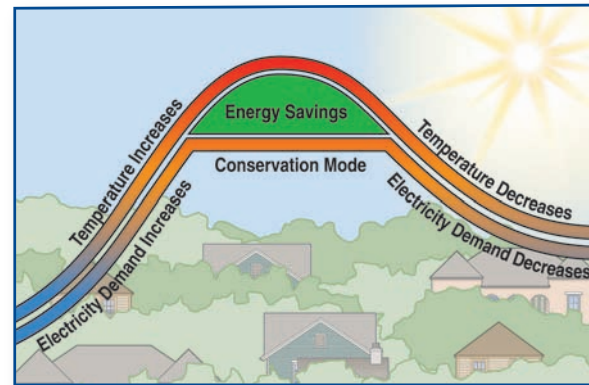

After you schedule your appointment, we will visit your home to install a new programmable thermostat in place of your existing thermostat. Installation generally takes a little over an hour.

3. Wireless signal sent

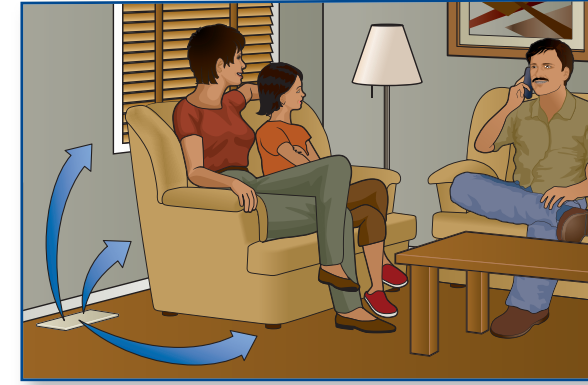

When demand for electricity peaks, we will send a wireless signal that "cycles" the compressors of participants' central air conditioning units and heat pumps. Typically these conservation periods amount to less than 1% of the year.

4. Balance the demand for electricity

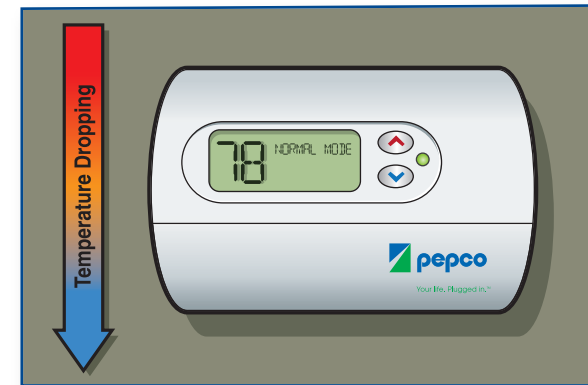

As participating central air conditioning units and heat pumps are cycling, the demand for energy lessens. As a result, less electricity needs to be generated, helping avert energy shortages and reducing carbon emissions.

5. Maintain your routine

Depending on your participation level, you may or may not notice the change in temperature as your air conditioner's fan continues to circulate cool air during a conservation period.

6. Conservation mode ends

Once the Pepco Energy Wise Rewards conservation period has ended, and the demand for electricity has lessened, your equipment returns to standard operation.
